

# The Chronicles of The Mathetia

**Designed by:**  
Cheng Z.

# (Definity Epoch) DE 0: The Founding of Reality

In the emptiness and shadow,  
"Pythagoras" sparked the Fire of  
Number. This mystical flame burned the  
darkness, bringing about a sense of  
organization in a universe of chaos.

Pythagoras set a fundamental principle:  
"All things are built upon mathematics,  
and thus, all actions must follow  
mathematical laws."

Since then, time began to flow.  
The Definity Epoch began.

## DE 11: The Terraforming

After 11 years, a new entity known as "Plato"  
appeared. He used the Earth of Logic to  
shape the land and named it "The Mathetia."

Mountains rose, caves delved deep, and  
islands appeared. At the heart of Mathetia,  
an island emerged, connected to the  
mainland by three magnificent bridges  
extending from the west, north, and east.

Plato established the second unchanging  
rule: "Since the Earth embodies the essence  
of math, it shall endure forever."

## DE 23: Genesis of Life

---

An entity named "Thales" emerged. With the Water of Life, he shaped seas and rivers, as well as lives including humans and monsters.

The first group of human being called "the Original 50," were blessed with exceptional mathematical abilities. Pleased with this first creation, Thales granted them an unusually long lifespan of 1,000 years.

Thales then decreed the third law of existence: "For humans, their maximum lifespan is 100 years. Deadly diseases are nonexistent; only conflicts can decrease the population."

## DE 69: The Geometry of Existence

---

The last cosmic being named "Euclid" emerged. Using the Wind of Shape, Euclid refined the forms and structures of all existing things, and he erected a mysterious pillar of light on the central island.

Euclid declared the last law of the realm: "No being shall come into contact with the light pillar. To do so would spell disaster for the world." Despite lacking any further explanation, the god's statement warned all creatures, prompting both humans and monsters to stay away from the light pillar.

# DE 100: The Rise of Calculus Palace

The first human civilization emerged on an island known as "Palace," which was entranced by an ethereal light pillar towering above them—a brilliance too dazzling to touch, yet too mesmerizing to ignore.

Enter Qin-tegral Limi-Tao, a master of calculus among “the Original 50.” With solemnity, he named himself “The Emperor” and took on the responsibility of guarding this phenomenon, setting a series of rules:

1. The guardian of the light pillar shall be known as "the Harbinger of Definity." This role must be filled by an individual of great strength.
2. Even the Harbinger will age and eventually be unable to fulfill their duty. Therefore, every fifty years, a successor must be chosen, but this selection must be made by the current Harbinger of Definity.
3. The light pillar in the Palace shall serve as the exclusive sanctuary of the Harbinger of Definity, shielding the pillar from the curiosity of others. Trespassers, despite warnings, will be slayed.
4. Every Harbinger of Definity can wield the Calculus Telescope and Microphone, tools enabling him to observe the world and issue global proclamations in search of a worthy heir.
5. If challengers are dissatisfied with the leadership of the Harbinger of Definity, they may challenge him to a duel by crossing a bridge and submitting a formal letter of intent.

## DE 110: Birth of Function Jungle

In the following decade, a new civilization emerged in the lush lands to the north. They named it "Function Jungle," a society built upon a reverence for nature and the divine mathematics that govern life. Leading this society was Lady Funcita Babylonara, also known as the "Function Phantom," the most skilled wielder of functional power among "the Original 50."

Function Jungle was also a haven for those who held strong beliefs in God and the splendor of the natural world, boasting the largest congregation of such individuals among all the settlements.

## DE 125: Establishment of Trigonometry Desert

In the dry wastelands to the west, the third civilization arose— "Trigonometry Desert." Its creators were twins and renowned scientists among "the Original 50," Ra-Sin Nilegonus and Ra-Cos Nilegonus. Ra-Sin was charismatic and bold, while Ra-Cos was reserved and cautious. Their unmatched technological expertise drew many followers to their cause.

For the remaining members of "the Original 50" in Trigonometry Desert, two paths lay ahead: either a deadly competition with Ra-Sin or a discreet departure to other territories facilitated by Ra-Cos.

## DE 145: Unveiling of Rational Field

In the eastern reaches, the fourth and last significant civilization emerged, named "Rational Field." Its founder, Algeus Hypnotides, stood apart as he was not part of "the Original 50." Nonetheless, he surrounded himself with ministers from among "the Original 50," including one who possessed the skill of hypnotism.

## DE 150: The Mysterious Disappearance

"The Emperor," the first Harbinger of Definity, suddenly vanished, so the remaining members of "the Original 50" convened to address the situation. However, none of them were willing to do so due to discomfort around the light pillar and a reluctance to abandon their own societies.

In order to maintain order, a compromise was reached. A lesser skilled adept in calculus, a descendant of "the Original 50," was chosen as the new Harbinger, albeit with a limited lifespan of 100 years.

As the Definity Epoch transitioned into a new era, its inhabitants continued to be governed by the mathematical principles established eons ago.

# DE 175: The Endurance of The Second Harbinger

Though the second Harbinger of Definity is not as potent in the arts of calculus as "The Emperor," he benefited from its power, suffering less discomfort near the sacred light pillar than an ordinary person would. As he endured the unease, he discovered that his proficiency in calculus is consistently improving. He kept this discovery hidden, determined to reveal it only to his destined successor.

Driven by ambitions to overthrow the Harbinger, many troops from Trigonometry Desert marched across the West Bridge. While the second Harbinger might not possess the overwhelming prowess of his predecessor, his skills in calculus proved to be sufficient. The duel on the bridge concluded in the collective defeat of the challengers.

Meanwhile, Ra-Sin's faction in Trigonometry Desert harboured territorial ambitions, inching quietly toward expanding their boundaries into Function Jungle, undetected at first due to its high technologies.

## DE 200: A New Leadership Marred by Fear

A person from Function Jungle who wielded the power of inverse functions was chosen as the successor to the second Harbinger. Due to his near-infinite qualities, he favoured the second Harbinger, who possessed the power of Calculus.

The third Harbinger assumes their role. Unlike the previous Harbinger, he carried a deep desire to flee. Overwhelmed by the immense pressure of witnessing divine creations up close for the first time, he lived in perpetual fear. Despite knowing that his power would grow alongside the pain caused by the sacred light pillar, he could not shake the constant dread that grips them.

## DE 205: Function Phantom's Retaliation

Frustrated by the ongoing secretive expansion efforts of Trigonometry Desert, Function Phantom decided to take action and reversed all of their clandestine advancements made over the past three decades. Meanwhile, the elder faction of Trigonometry Desert feigned reconciliation while covertly plotting revenge.

In contrast, the younger faction admitted their inability to act differently and sincerely apologized to Function Phantom for their actions.

## DE 210: Operation Babylonia

The elder faction initiated a large-scale military operation against Function Jungle, code-named "Operation Babylonia." They began a massive military buildup and recruit national experts for the war. The younger faction protested and covertly sabotaged the elder faction's actions.

Simultaneously, the king of Rational City was assassinated, leading to a state of chaos and noble infighting within the city. A large number of citizens fled to Rational Field to avoid the danger and become farmers.

## DE 230: The Fall of the Third Harbinger

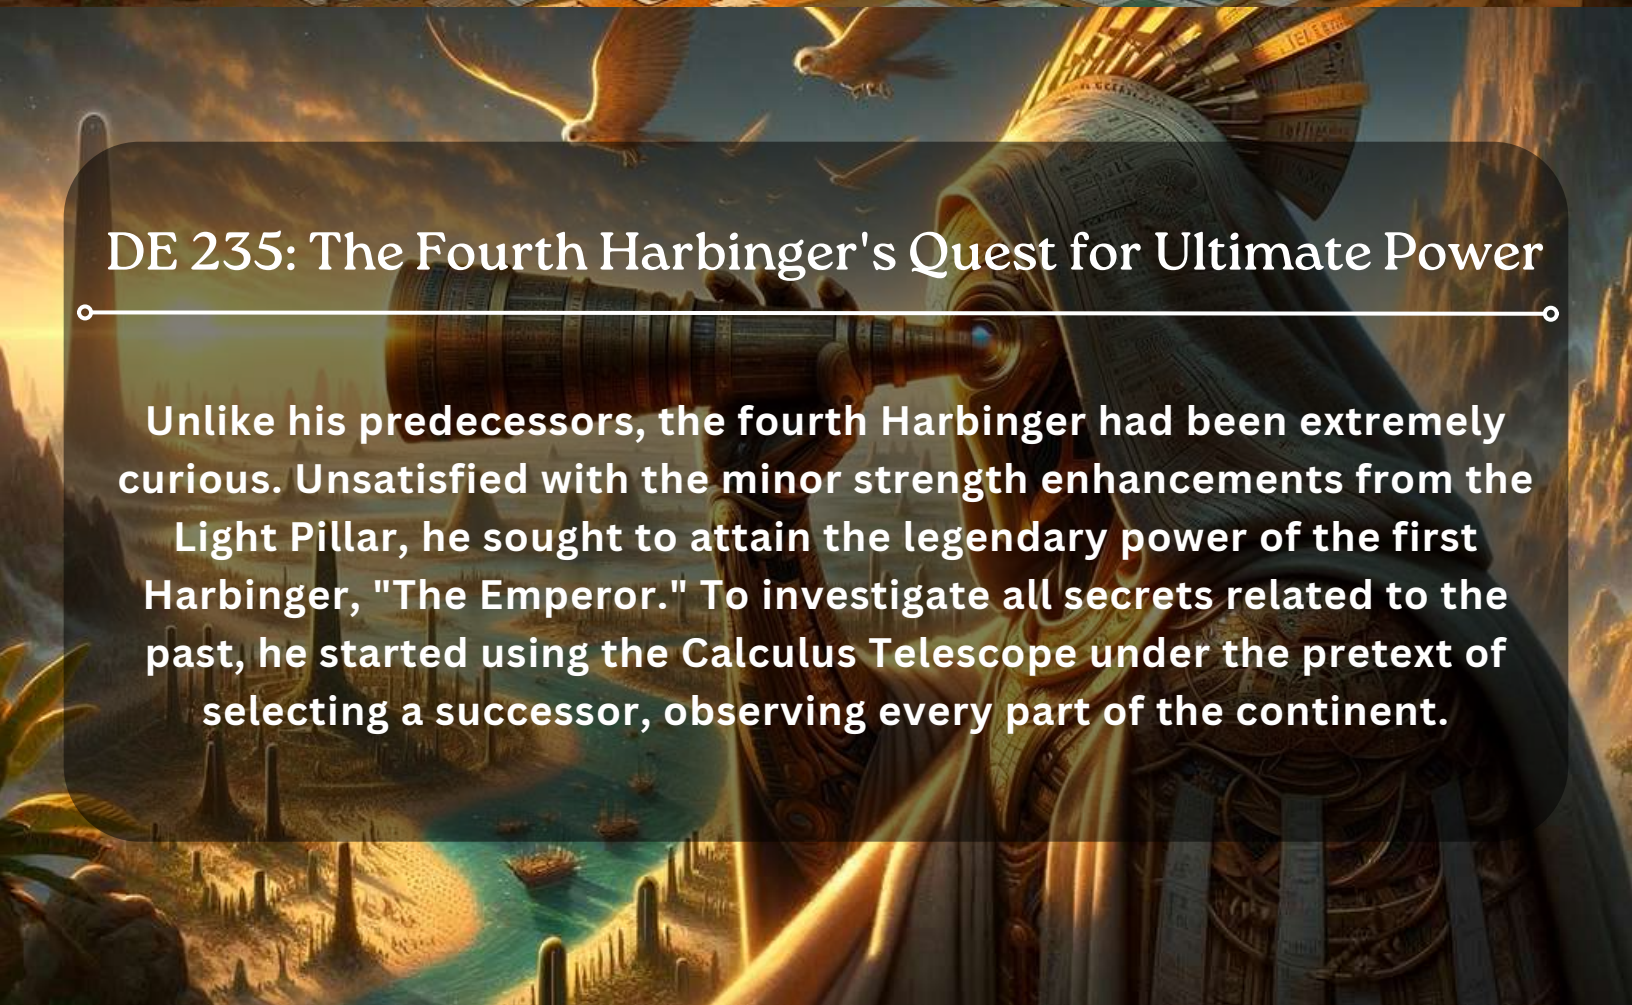

A second duel request was sent from a group of challengers from Trigonometry Desert, aiming directly at the third Harbinger. Unexpectedly, the powerful Harbinger was defeated and slain by the strongest wielder of Tangent Forces, who then ascended to become the fourth Harbinger.

## DE 231: The Verge of War and Rebellion

As the elder faction finalized their preparations for a large-scale assault, the younger faction led a rebellion secretly, commanding a fourth of the civilization's population under the desert to oppose the elder faction's attack. Function Phantom kept vigilant and continued building defensive fortifications.

## DE 235: The Fourth Harbinger's Quest for Ultimate Power

Unlike his predecessors, the fourth Harbinger had been extremely curious. Unsatisfied with the minor strength enhancements from the Light Pillar, he sought to attain the legendary power of the first Harbinger, "The Emperor." To investigate all secrets related to the past, he started using the Calculus Telescope under the pretext of selecting a successor, observing every part of the continent.

## DE 245 / IE 0 (Infinity Epoch): The Calamity Unleashed by the Fourth Harbinger

---

After nearly a decade of research, the fourth Harbinger of Definity concluded that the only way to breakthrough was to touch the Light Pillar directly. He believed that "The Emperor" had gained his strength not only from divine blessings but also directly from contact with the Light Pillar, dismissing the rumoured world disasters as lies.

After learning some secret technologies in Trigonometry Desert, the harbinger managed to approach the Light Pillar without suffering any pain. However, at the moment he touched the Light Pillar, the world started to collapse.

*"In a year etched indelibly into the annals of human history, the fourth Harbinger dared to touch the Light Pillar, meeting instant death as a consequence. With this cataclysmic act, the 'Infinity Force' was unleashed, marking the onset of the Infinity Epoch. Almost immediately, monsters—once created parallel to humanity—erupted in unprecedented violence, their malice spreading like wildfire across the continent."*

## DE 246 / IE 1: The Onset of Infinity Force

---

Emerging from The Vortex to the east of Function Jungle, the Infinity Force spread throughout the world. This power strangely affected only the monsters across all continents, heightening their aggression to never-before-seen levels.

Function Phantom, already a powerful force, sadly succumbed to the Infinity Force. Gradually losing her sanity, the phantom morphed into a being of pure, uncontrollable fury, worsening the already difficult battle for Function Jungle. Luckily, a few members of "the Original 50" remained in Function Jungle, steadfastly protecting their final refuge.

## DE 255 / IE 10: The Resilient Stand of Trigonometry Desert

---

After ten years of hardship, the people of Trigonometry Desert displayed remarkable resilience. Despite enduring significant casualties, their unwavering determination enabled them to protect their capital city successfully. Concurrently, Elder Brother Ra-Sin pioneered human-machine integration technology, which significantly enhanced the abilities of their troops when merged with machinery, and hastened the pace of their counterattack.

# DE 355 / IE 110: The End of the A-Hundred-Year War and Casualty Report

---

The war, although grueling, was finally nearing its conclusion with a high cost:

Rational City: 97,723 deaths, 455,623 monsters eliminated

Function Jungle: 326,231 deaths, 1,091,981 monsters eliminated

Trigonometry Desert: 5,145,141 deaths, 12,313,432 monsters eliminated

In Function Jungle, Function Phantom, after years of struggle against the Infinity Force's infection, finally lost her sanity, adding another layer of hardship for the inhabitants of Function Jungle.

Amidst the calamities, something strange occurred in Rational City. No one dared to venture beyond their civilization without any reason.

In Trigonometry Desert, the elder and younger factions had worked cohesively up until this point, but as the Infinity Force's influence receded, their unity began to fracture again. Elder Brother Ra-Sin, having designed much of the advanced technology that kept them in the fight, argued for the perpetual modernization of their armed forces, insisting that "future threats could be far worse, so we have to increase our military force and be prepared."

Meanwhile, the younger faction, led by Younger Brother Ra-Cos, became increasingly skeptical of technology's role, pointing out that it was the fourth harbinger's technological hubris that had touched the Light Pillar and unleashed the calamity in the first place. "We must return to our roots, embrace the natural arts, and refrain from disturbing the cosmic balance any further," he pleaded. The division within the Desert grew palpable, and it became clear that although the war against the monsters might be ending, a new internal conflict was on the horizon.

# DE 365 / IE 120: Unraveling Threads in a Frayed World

---

As the Infinity Force's malevolent influence continued to destabilize Function Jungle, chaos engulfed the once serene landscape, rendering it almost uninhabitable. Meanwhile, within Trigonometry Desert, internal conflict raged unabated between the elder and younger factions, plunging the region into self-destructive turmoil.

Amidst these crises, the Harbinger of the Light Pillar vanished, leaving behind a world on the edge of collapse. Yet, amidst the chaos, a glimmer of hope emerges—a singular breakthrough that could reverse the tide of destruction.

Xenon, the responsibility now rests upon your shoulders. In the embattled realm of Mathetia, where reality itself hangs by a thread, your moment to enact change has arrived.

It is time to forge your own miracle upon this vast land.
